Project Overview

Online Farmers Market

The number one online market place for farmers(vendors) to sell farm produce and customers to buy fresh farm products.

Project Details

Background

Due to the rise in the need for a variety of easily accessible healthy and fresh farm produce, and a global market for farmers to showcase and scale their businesses, we have created a Multi-Vendor Ecommerce Website which will house different venders from different areas with a variety of goods and make it easier for customers to access healthy farm products from anywhere within the Vendor's delivery region.

Goals

This is a simple MultiVendor e-commerce website built with Django (Python) and Stripe is added as payment processor.

In this website, Vendors (Stores) can register and add their products.

And Users can visit the product and order by paying with Debit/Credit Card (Stripe is Used).

Then Vendor gets the email notification about the order and should deliver the product to the customer based on the address details.

Targrt Market

- Farmers (vendors)
- Customers who are in need of healthy fresh and easily accessible farm products which can be delivered to them without leaving their location.
